

Lead Cost Estimator

Proman Portugal

February, 2023

As part of our Growth strategy the Proman Portugal office is currently strengthening his team by looking for a Lead Cost Estimator to support our current global projects. Committed with decarbonization Proman is currently looking to growth its team to deliver large scale low-carbon industrial projects.

Position Overview:

Candidate will be integrated into the EPC Team as part of Proman's E&C division and will be based in Portugal.

Key Responsibilities:

- Provide all cost engineering expertise and coordinate activities as group/unit leader as required
- Prepare capital cost estimates for the construction of industrial petrochemical, energy storage and oil&gas facilities and Total-Installed-Cost (TIC) including proposal, pre-feasibility, FEED and detail cost estimates for EPC contract execution
- Lead and promote efforts to find innovative estimating methods
- Continuously review and update cost engineering methods & procedures
- Support Engineering and Project Management teams in developing:
- Cost estimates by analysing proposals, equipment specifications and related documents

- Equipment pricing using ASPEN ACCE tool and other internal cost estimation tools
- Identifies labour, material, and time requirements by studying proposals, equipment specifications, and related documents
- Computes costs by analysing labour, material, and time requirements
- Prepares special reports by collecting, analysing, and summarizing information and trends
- Maintains cost data base
- Assist with the preparation of cost portion of the engineering, procurement, and construction contracts
- Review multi-discipline conceptual, detailed, and definitive cost estimates for capital projects to ensure accuracy, completeness, and compliance with the scope of work
- Review and/or verify Material Take-off (MTO's) against engineering documents or packages for estimates prepared by the engineering team

Experience

At least 5 years work experience in industrial projects

Required Qualifications

- Degree in Mechanical Engineering, Construction Management, Engineering, Quantity Surveying and/or in a similar field
- Preferred industry of experience in power, heavy industrial, gas separation, oil / natural gas or process facilities
- Experience in construction projects strongly valued
- Language skills: English, others (German, Portuguese, French) are beneficial
- MS Office, in particular Excel
- Soft skills: target oriented, team player
- Demonstrate experience in the use of cost and estimating tools and the application of market conditions and risk management to estimates

About Proman

Founded in 1984, Proman started as a **PRO**ject **MAN**agement company specialized in the construction of large industrial projects. Today we are a global leader in natural gas derived products and services.

Headquartered in Switzerland, we are a multi-asset, multi-regional diversified energy producer with methanol and fertilizer production facilities in Trinidad and Tobago, the United States and Oman and we are currently expanding into Mexico.

Proman has a global presence in the production, sale and distribution of natural gas derived products, including methanol, ammonia, melamine and UAN solution, as well as assets for the production of natural gas onshore in the United States and offshore in Trinidad and Tobago.

Proman is also a significant services business, with extensive experience in engineering, plant operations, petrochemical and power plant construction, product marketing and logistics, project management and project development. Our global development teams fund and develop projects, providing support at all stages by securing environmental permits, arranging critical commercial contracts and raising asset-level financing, to help bring projects to completion across the petrochemical and energy industry. They are also always looking for ways to utilize Proman's experience and integrated value chain to explore innovative and forward-looking energy solutions.

We cover all aspects of the gas molecule's journey from extraction through to production and onwards to the delivery of the final product to our partners. We are proud to have created a fully integrated value chain within the Proman family of companies.

Our people's commitment and quality define us as a company. Our highly skilled and talented teams around the world use their expertise and experience to deliver high quality services across the business in project development and project management, in the construction and upgrade of plants, in the management of plant operations as well as in the maintenance and turnarounds of existing facilities.
