About Proman

Founded in 1984, Proman started as a **PRO**ject **MAN**agement company specialized in the construction of large industrial projects. Today we are a global leader in natural gas derived products and services.

Headquartered in Switzerland, we are a multi-asset, multi-regional diversified energy producer with methanol and fertilizer production facilities in Trinidad and Tobago, the United States and Oman and we are currently expanding into Mexico.

Proman has a global presence in the production, sale and distribution of natural gas derived products, including methanol, ammonia, melamine and UAN solution, as well as assets for the production of natural gas onshore in the United States and offshore in Trinidad and Tobago.

Proman is also a significant services business, with extensive experience in engineering, plant operations, petrochemical and power plant construction, product marketing and logistics, project management and project development. Our global development teams fund and develop projects, providing support at all stages by securing environmental permits, arranging critical commercial contracts and raising asset-level financing, to help bring projects to completion across the petrochemical and energy industry. They are also always looking for ways to utilize Proman's experience and integrated value chain to explore innovative and forward-looking energy solutions.

We cover all aspects of the gas molecule's journey from extraction through to production and onwards to the delivery of the final product to our partners. We are proud to have created a fully integrated value chain within the Proman family of companies.

Our people's commitment and quality define us as a company. Our highly skilled and talented teams around the world use their expertise and experience to deliver high quality services across the business in project development and project management, in the construction and upgrade of plants, in the management of plant operations as well as in the maintenance and turnarounds of existing facilities.
